Carpets Cleaner

DESCRIPTION

DepHyze™ Carpet Cleaner provides 100 percent biological and chemical odor negation (i.e., true chemical neutralization instead of simply masking odors). A two-part liquid, it is extremely effective at neutralizing tough odors in carpet caused by mold, mildew and pets as well as smoke from fire, cigarettes and other tobacco products. In a typical upright carpet cleaning machine, 12 ounces of DepHyze carpet cleaning mixture will clean approximately 1,000 sq. ft. of carpet.

MIXING INSTRUCTIONS

Combine DepHyze Carpet Clean Part I and Part II at a 1:1 ratio by volume. Measure each part as accurately as possible, use separate for each part to avoid cross contamination. After combining, the two parts can be mixed with water at a rate of 12 oz. of DepHyze Carpet Clean Mixture to one gallon of water to provide a working solution for most carpet cleaning machines.

IMPORTANT

Once Part I and Part II have been combined the mixture must be used within 8 hours to be effective. After 12 hours, the mixture becomes benign and can be poured down the drain.

COVERAGE

In a typical upright carpet cleaning machine, 12oz. of DepHyze carpet cleaning mixture will clean approximately 1,000 sq. feet of carpet. This is a typical ratio and use rate and actual coverage will vary depending on the soil load, type of carpet and type of machine being used.
